

The Upper Turtle Lake District is applying for a permit from the WDNR to treat up to 20 acres with the aquatic herbicide Aquathol K (active ingredient endothall) to control the invasive plant curly leaf pondweed. Proposed treatment areas are outlined in blue on the map.

Herbicides are used early in the season at a low dose to avoid harm to native plant species. This proposed treatment would occur between April 15 and June 1, 2024. The treatment is according to the Aquatic Plant Management Plan approved by the Wisconsin DNR. A map of the treatment areas is shown. A copy of the permit is available by request by emailing harmonyenv@amerytel.net.
